Complete your
Ultion security with
ULTION
KEY CONTROL

£5000 guarantee.

The most common method of forcing a door lock open is to snap the lock. It takes only 9 seconds, no skill and is very quiet. Ultion resists lock snapping.

The £5000 Ultion security guarantee is your lock snapping peace of mind.

Made with
Molybdenum.
25% denser than iron.

What makes an Ultion 3 Star PLUS lock so incredibly tough is the molybdenum core that forms its independent central cylinder shield.

25% denser than iron, this metal is not only extremely ductile and resistant to corrosion, but has one of the highest melting points of all pure elements.

Introducing LockDown Mode™

Inside the Ultion 3 Star PLUS door lock is an additional hidden lock, another layer of protection against intruders. Encased in a core made with molybdenum, LockDown Mode™ is triggered when Ultion detects a snapping attack.

With LockDown Mode™ active, Ultion blocks the intruder from entry whilst allowing you and your family to disengage the lock normally from inside.

New **easy glide** key design.

The easy glide key design takes the fiddle out of security.

Uniquely coded. **Uniquely yours.**

The keys for every Ultion lock are engraved with your own encrypted identification code.

The UK's **thickest** key.

The key for both the Ultion 1 Star PLUS and 3 Star PLUS are made stronger, thicker and more resistant to snapping or bending.

Ultion Key control for added security.

Ultion key control prevent Ultion keys from being copied without the homeowners permission.

Once an Ultion lock is registered, any keys ordered with its unique code will trigger an approval email for authorisation before they go into production.
